Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

N.Alternate names: hypothetical protein F13P17.5
C. Species: Arabidopsis thaliana (mouse-ear cress)
C. Species: D. J. Lin, X.; Kaul. Sp. Sp. J. Lin, X.; Extransion T02309
A. Secretation: Arabidopsis thaliana chromosome II BAC F13P17 genomic sequence.
A. Accession: T02309
A. Status: Lanslated from GB/EMBL/DDBJ
A. Molecule type: DNA
A. Residues: 1-990 cROU>
A. Residues: 1-990 cROU>
A. Residues: Sembl. Accounting thaliana chromosome II BAC F13P17 genomic sequence.
A. Residues: S. Rountselv, S.D.: Shea, T.P.; Benito, M.I.; Town, C.D.; Fujii, C.Y.;
M.; Koo, H.; Moffat, K.S.; Conin, L.A.; Shen, M.; Vanaken, S.E.; Umayam, L.; Tallon, L. Bustre 402, 761-768, 1999
A. Title: Sequence and analysis of chromosome 2 of the plant Arabidopsis thaliana.
A. Accession: G84753
A. Status: preliminary
A. Molecule type: DNA
A. Residues: 1-990 cROU>
A. Title: Sequences and analysis of chromosome 2 of the plant Arabidopsis thaliana.
A. Residues: 1-990 cSTO>
A. Cross-references: GB-ABC02093; NID:g3337352; PIDN:AAC27397.1; GSPDB:GN00139
C. Genetics: F13P17
A. Status Prilliniary

A;Title: Nucleotide sequence of the alpha-amylase-pullulanase gene from Clostridium ther A;Reference number: A44765; MUID:90362027
                                                                                                                                                                                alpha-amylase (EC 3.2.1.1) / alpha-dextrin endo-1,6-alpha-glucosidase (EC 3.2.1.41) pred
C;Species: Thermoanaerobacter thermohydrosulfuricus
C;Date: 03-Mar-1993 #sequence_revision 03-Mar-1993 #text_change 15-Oct-1999
                                                                                                                                                                                                                                                                                                                                                                                                                  A.Status: preliminary
A.Molecule type: DNA
A.Molecule type: 1. PID:g144727
C.Function: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A.Posthway: glycogen/starch degradation
C.Superfamily: flbronectin type III repeat homology
C.Superfamily: flbronectin type III repeat homology
C.Keywords: glycosidase; hydrolase; polysaccharide degradation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               T43330

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 15, A Sequence 25, A Sequence 10, A Sequence 10, A Sequence 10, A Sequence 451, Sequence 2, Ap Sequence 12, A Sequence 14, A Sequence 15, A Sequenc

-I-FUNCTION: COMPONENT OF THE COPII COAT, THAT COVERS ER-DERIVED
THE GOLGI APPARATUS. COPII ACTS IN THE CYTOPLASMIC RETICULUM TO
THE GOLGI APPARATUS. COPII ACTS IN THE CYTOPLASMIC PROMOTE THE
TROM THE ENDOPLASMIC RETICULUM TO THE GOLGI COMPLEX.

-I-SUBUNIT: COPII IS COMPOSED OF AT LEAST FIVE PROTEINS: THE SEC23/24
COMPLEX. THE SEC13/31 COMPLEX AND SARI.

-I-TISSUE SPECIFICITY: EXPRESSED IN FIBROBLASTS, HEPATOCYTES, AND
LYMPHOCYTES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               20-AUG-2001 (Rel. 40, Created)

                                                                                                                                                   The retrovirus has Superantigen (549) activity. It can be used as part of a method is specifically used to diagnose type I diabetes mellitus. Modified proteins expressed by the retroviral sequence mellitus. Modified proteins expressed by the retroviral sequence (without SA9 activity but still able to induce an immune response) are useful in vaccines to treat or prevent SA9-related autoimmune disease; uncleic acid sequences encoding (modified) SA9 can be used similarly to treat such diseases, Retroviral-encoded SA9 are important in pathogenesis of autoimmune disease, probably by activating autoimmune disease, probably by activating between expressed and non-expressed viral nucleic acids) and can be used even where the pathogen is an ubiquitous endogenous retrovirus. Blood corporate and the pathogen is an ubiquitous endogenous retrovirus. Blood diagnosis can be made before clinical signs are apparent, allowing early intervention before severe tissue damage has occurred.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

This is the envelope protein (Env) of a new human endogenous retrovirus (HERY), designated IDDMX1.2-22, that has been identified as the source of Superantigen (SAP) activity in insulin-dependent diabetes mellitus (IDDM) patients. The endogenous retrovirus is ubiquitous in the human genome but is only expressed in diabetic individuals. The HERY encodes SAP activity within the env gene. A claimed process for the diagnosis, including the pre-symptomatic diagnosis, of a human autoimmune disease associated with a HERV caping SAP activity comprises specifically detecting in a biological sample either: (a) the mRNA of an expressed HERV having SAP activity (especially IDDMX1.2-22 5'LTR, 3' long terminal repeat, env or pol); (b) a protein or peptide expressed by the HERV (see AAW97745-48); (c) antibodies specifically associated with the HERV. Products of the invention can be used to identify substances capable of blocking transcription or translation of SAP encoding nucleic acid sequences, useful in the SAP, and/or prevention of autoimmune disease associated with the SAP. A nucleic acid encoding the endogenous SAP in IDDM suggests a general model according to which self SAP-driven and systemic activation of autoreactive T

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                       associated human endogenous retrovius (IDDMK1.2-22) env/fs protein.

The retrovius has Superantigen (SAg) activity. It can be used
as part of a method is specifically used to diagnose type I diabetes
mellitus. Modified proteins expressed by the retroviral sequence
(without SAg activity but still able to induce an immune response)
are useful in vaccines to treat or prevent SAg-related autoimmune
disease; nucleic acid sequences encoding (modified) SAg are important
in pathogenesis of autoimmune disease, probably by activating
autoreactive T cells. The method is very specific (it can differentiate
between expressed and non-expressed viral nucleic acids) and can be used
con where the pathogen is an ubiquitous endogenous retrovirus. Blood
cor plasma samples can be tested without extensive preparation and
diagnosis can be made before clinical signs are apparent, allowing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

This is the envelope (Env)/FS polypeptide of a new human endogenous retrovirus (HERV), designated IDDMK1.2-22, that has been identified as the source of superantigen (SAG) activity in insulin-dependent diabetes mellitus (IDDM) patients. The endogenous retrovirus is ubiquitous in the human genome but is only expressed in diabetic individuals. The HERV encodes SAG activity within the env gene. A claimed process for the diagnosis, including the pre-symptomatic diagnosis, of a human autolimune disease associated with a HERV call ample either: (a) the mRNA of an expressed HERV having SAG activity (especially IDDMK1.2-22 5'LTR, 3' long terminal biological sample either: (a) the mRNA of an expressed by the HERV (see AAW97745-4B); (c) antibodies specifically associated with the HERV. Products of the invention can be used to identify substances capable of blocking transcription or translation of SAG-encoding nucleic acid sequences, useful in therapy and/or prevention of autolimmune disease associated with the SAG. A nucleic acid encoding the endogenous SAG in IDDM suggests a general model according to which self SAG-driven and systemic activation of autoreactive T
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 LMPAVQNWLVEVPTVSPNSRFTYHMVSGMSLRPRVNYLQDFSYQRSLKFRPKGKTCPKEI 120

The sequence is that of an insulin-dependent diabetes mellitus associated human endogenous retrovirus (IDDMK1.2-22) env/fs-sag protein. The retrovirus has Superantique (S49) activity. It can be used as part of a method is specifically used to diagnose type I diabetes mellitus. Modified proteins expressed by the retroviral sequence (without S49 activity but still able to induce an immune response) are useful in vaccines to treat or prevent S49-related autoimmune disease, nucleic acid sequences encoding (modified) S49 can be used similarly to treat such disease, probably by activating in pathogenesis of autoimmune disease, probably by activating autoractive T cells. The method is very specific (it can differentiate between expressed and non-expressed viral nucleic acids) and can be used even where the pathogen is an ubiquitous endogenous retrovirus. Blood cor plasma samples can be tested without extensive preparation and diagnosis can be made before claincal signs are apparent, allowing carly intervention before severe tissue damage has occurred.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

This is the envelope protein (Env) of a new human endogenous retrovirus (HERV), designated IDDMK1.2-22, that has been identified as the source of superantigen (SAg) activity in insulin-dependent diabetes mallitus (IDDM) patients. The endogenous retrovirus is ubiquitous in the human genome but is only expressed in diabetic individuals. The HERV encodes SAg activity within the env gene. A claimed process for the diagnosis, including the pre-symptomatic diagnosis, of a human autoimmune disease associated with a HERV having SAg activity comprises specifically detecting in a biological sample either: (a) the mRNA of an expressed HERV having capetivity (especially IDDMK1.2-22 5'LTR, 3' long terminal repeat, env or pol); (b) a protein or peptide expressed by the HERV: or (d) SAg activity specifically associated with the HERV. See AAW97745-48); (c) antibodies specific to the proteins expressed the HERV. See AAW97745-48); (c) antibodies specifically associated with the HERV. Products of the invention can be used to identify substances capable of blocking transcription or translation of SAg-encoding contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         autoimmune disease associated with the SAg. A nucleic acid encoding human retroviral SAg can be used as a DNA vaccine. Expression of the endogenous SAg in IDDM suggests a general model according to which self SAg-driven and systemic activation of autoreactive T cells leads to organ-specific autoimmune disease.
                                                                                                                                                                                                                                            HERV; IDDKKI.2-22; superantigen; SAg; antigen; IDDM; insulin-dependent diabetes mellitus; autoimmune disease; diagnosis; therapy; vaccine; envelope protein; env gene.

The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                               Peptide #495 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         probes useful
